Subject: L.E. CARPENTER & COMPANY ~ NJD002168748
Free Product Remedial Strategy
Background Lead Investigation Sample Locations

Call Info: Dial-In Number (712) 421-7419
Participant Code 252594

I. PURPOSE

The purpose of this conference call is to facilitate open discussion regarding the current and planned free product investigative and remedial strategies, and if time permits, discuss the proposed background lead sampling locations in an effort to obtain verbal approve to move forward with the agency approved lead investigation scope before winter.

I. MAIN TOPICS FOR DISCUSSION

- Modifications in free product remedial approach as they relate to the developing conceptual site model.
- The on-site thermal treatment option.
- Bench scale (treatability) testing of on-site thermal treatment.
- Thermal treatment workplanning for full scale site implementation.
- Evaluation of additional options if on-site thermal treatment is deemed to be nonviable via a bench scale testing.
- Lead background sample locations (Sept 4, 2001 RMT deliverable) (*time permitting*).
- Maintaining open lines of communication to facilitate both a more timely review and scope implementation.
